

UNIVERSAL JOINTS TYPE NJ AND DJ

Wiper drive offers Universal Joints both single and double type; designed and built to precision quality and accuracy. They are compact made to close limits to which all parts they are held. They assure maximum load carrying capacity with durability and long life. Universal joints are made and pilot bores are also

available.

For maximum efficiency Srikesh Universal Joints should not be operated at more than 35 derees angularity, although they will operate upto angles of 30-32 degrees.

Horse power ratings apply only when joints operate in approximate straight line. Loads and speeds should be reduced as the operating angularity is increased. For larger angularities, double type joins can be used.
